

SAMPLE TESTIMONIALS FROM CLINICAL PSYCHOLOGISTS

◀ COMIT - THE CLINICAL FORM OF ATI ASSESSMENTS ▶

◀-----▶
“I find the COMIT to be the most comprehensive, user-friendly, and highly engaging intellectual assessment tool available. What took me a couple of hours previously, now takes a fraction of the time.”

Clay Mills, Ph.D.
School Psychologist
Colorado City School District
Colorado City, AZ

◀-----▶
“Students have been approaching me requesting to take the COMIT!”

Donald J. Asbridge, Ed.S.
School Psychologist
Taft Union High School District
Taft, CA

◀-----▶
“In circumstances necessitating accurate, rapid and large scale measures of cognitive abilities (e.g., a national call-up of individuals into military service, and assessment for ‘special abilities’ applications), the COMIT would be an excellent tool for obtaining reliable information about individual abilities.”

Joseph Vandergrift PhD.
School Psychologist - Holden, MA
Adjunct Faculty
Dept. of Education & Social Rehabilitation
Assumption College - Worcester, MA

◀-----▶
“The COMIT is a most helpful and useful test instrument.”

Richard L. Beattie EdD
Licensed Psychologist
Starkville, MS

“The COMIT is a “state of the art” assessment instrument that utilizes modern technology in a milieu that is familiar to students. The exciting graphics are more engaging and motivating than traditional instruments. I highly recommend the COMIT!”

Linda Halperin, Ed.S.
School Psychologist
New Jersey

“I have used the COMIT on many students..... and it has exceeded my expectations across all areas. I recommend the COMIT, without reservation, to other school and clinical psychologists.”

Greg Nunn, Ph.D.
Clinical and School Psychologist
San Diego, CA

“The COMIT is a refreshing and enjoyable alternative to the Wechsler test. In comparison, populations with ADHD seem to get a more valid and representative measure of intellectual abilities because of the composition of the fluid and crystallized scales not being heavily weighted with speed and time measures.”

Dr. George N. Fincher
Chattanooga Behavioral Medicine Center
Nationally Certified School Psychologist
Nationally Certified Psychologist
Chattanooga, TN

“The COMIT provides clinicians with an extremely meaningful way of assessing an individual's intellectual functioning that approximates in-depth assessments. It is like having a computerized Wechsler Scale and the TOVA built into one instrument.”

Robert E. McCarthy, PhD
Fellow, American Association of
Integrative Medicine

“The COMIT is an effective and accurate measure of cognitive abilities, on par with the main individually administered tests of cognitive abilities traditionally utilized. The utility of the measure for providing highly accurate measures of cognitive abilities is especially demonstrated in assessing populations with special interests (i.e., gifted) and special needs (i.e., disabilities.)”

Joseph Vandergriff PhD.
School Psychologist - Holden, MA
Adjunct Faculty
Dept. of Education & Social Rehabilitation
Assumption College - Worcester, MA

“The future is now! Computer-assisted assessment with the COMIT not only saves about two hours of testing time per case, but yields about twice the information.”

Donald J. Asbridge, Ed.S.
School Psychologist
Taft Union High School District
Taft, CA
